

Regulovatelné páky

Technopolymer, upínací prvek z oceli nebo nerezové oceli

TĚLESO PÁKY

Technopolymer na bázi polyamidu (PA) vyztužený skelnými vlákny, černo-šedá barva RAL 7021 (C1), oranžová barva RAL 2004 (C2), šedá barva RAL 7035 (C3), červená barva RAL 3000 (C6), matný povrch. Zabudovaný těsíčhran ze zinkové slitiny pro spojení s upínacím prvkem.

STANDARDNÍ PROVEDENÍ

Upevňovací šroub s vnitřním hvězdicovitým šestihranem typu TORX®

Vratná pružina z nerezové oceli AISI 302.

- **ERZ-A:** upínací prvek z brunýrované oceli se závitovým otvorem a přípevňovacím šroubem.
- **ERZ-SST:** upínací prvek z nerezové oceli AISI 303 se závitovým otvorem a přípevňovacím šroubem.
- **ERZ-p:** upínací prvek z brunýrované oceli se závitovým stemem a přípevňovacím šroubem.
- **ERZ-SST-p:** upínací prvek z nerezové oceli AISI 303 se závitovým šroubem a přípevňovacím šroubem.

VLASTNOSTI A POUŽITÍ

Zvláště vhodné v případě, kdy je úhel otočení páky omezený nedostatkem místa.

Kovové ozubení vnitřního těsíčhranu ze zinkové slitiny dovoluje montáž upínacích prvků vyrobených kompletně z kovu, které mohou být snadněji obráběny pro účely zvláštních provedení.

POKYNY PRO POUŽITÍ

Pro přestavení páky během upínání do jiné polohy zvedněte páku tak, aby se uvolnilo ozubení upínacího mechanismu ze záběru a otočte páku do požadované polohy. Po uvolnění páky zasune vratná pružina ozubení automaticky zpátky do záběru.

Nemůže-li se páka otočit o 360°, je možné upínací prvek snadno zašroubovat za použití šroubu s vnitřním šestihranem (po zvednutí páky).

* Registrovaná ochranná značka TEXTRON INC.

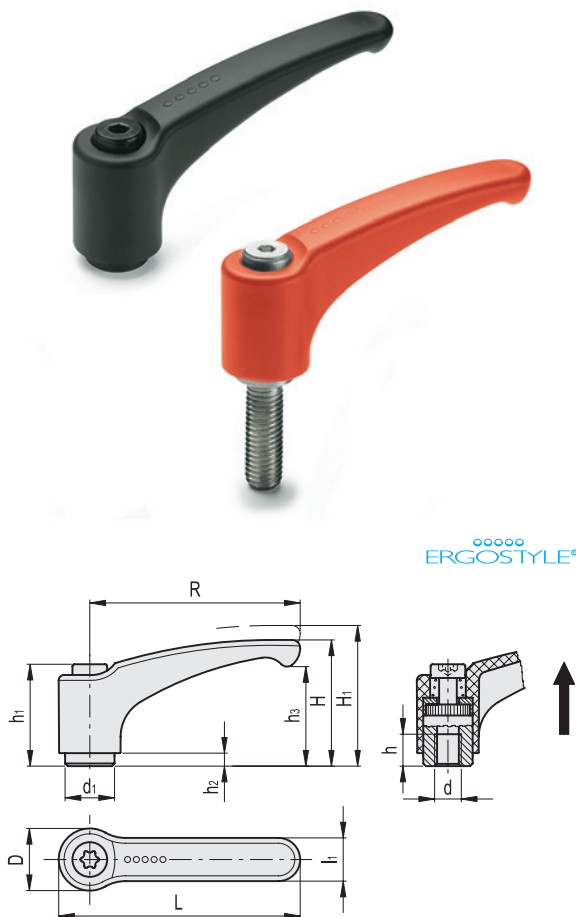

* Doplňte označení barvy krytky, např.: 237102-C1 ERZ.44-A-M4-C1
